Atlantis is the go-to utility fabric for entry-level use in the outdoors. The latest technology in solution dyeing saves 85% of our most valuable resource - water - compared to traditional dyeing processes. Energy consumption and the 2 are also reduced by over 90%. Our durable, water-resistant finish is fluorine-free, releasing zero CFC's release of CO into the atmosphere throughout the life of the fabric, and protecting the ozone layer. The PU backing is solvent-free. Not only does it use less water during manufacturing, but it is also environmentally safe. Atlantis, manufactured from high-quality polyester, is 99% recyclable through mechanical and chemical processes, ensuring that there is the absolute minimum waste.

Choosing Atlantis is synonymous with choosing one of the most environmentally friendly outdoor fabrics on the market. Not only will Atlantis meet the most stringent functional requirements, but they will also play a substantial role in protecting the environment for future generations.
